

# Vegetable and Herb Fall Planting Calendar

(DS) = Direct Seed (T) = Transplant	Start dates are the earliest dates recommended. It's fine to plant later but make sure there is enough time in the school year to harvest! Based on April 10th last frost date for NYC. Germination time varies depending on soil temperature.					This is an approximation that is based on optimal growing conditions, and will vary according to specific varieties, so check your seed packet for more details! If your garden is partially shaded, your plants will grow more slowly. Some crops can be harvested before they are fully matured and are even considered a delicacy when harvested young!
